JOHNSEN'S

FREEZE 12®

THIRD IN A SERIES

Freeze 12 has been in the marketplace since Summer '96 and the response has been tremendous. Reorders are coming in strong and the attributes of the product are being spread by word of mouth by the installers who have used it.

Several important points have been noted and are worth passing along:

- 1) It's critical not to overcharge the A/C system. Use 10% less than R-12 requirements. Any loss of performance in A/C systems charged with Freeze 12 have been directly related to overcharging.
- 2) If any lubricant is to be added to the A/C system, maximum performance will be achieved by the use of Ester lubricant.
- 3) A/C systems that contain mineral oil and are equipped with a sightglass may remain cloudy if Freeze 12 is used, even if fully charged. Therefore, do not use the sightglass as an indicator of system charge.

Do not overcharge! Carefully monitor pressure readings, duct temperatures, and disregard sightglass observations.

We will continue to pass along additional Freeze 12 Tech Tips as needed.

Freeze 12 is now available in 12 oz. cans as well as 30 lb. cylinders.
